## Data Factory

Hybrid data integration at scale, made easy

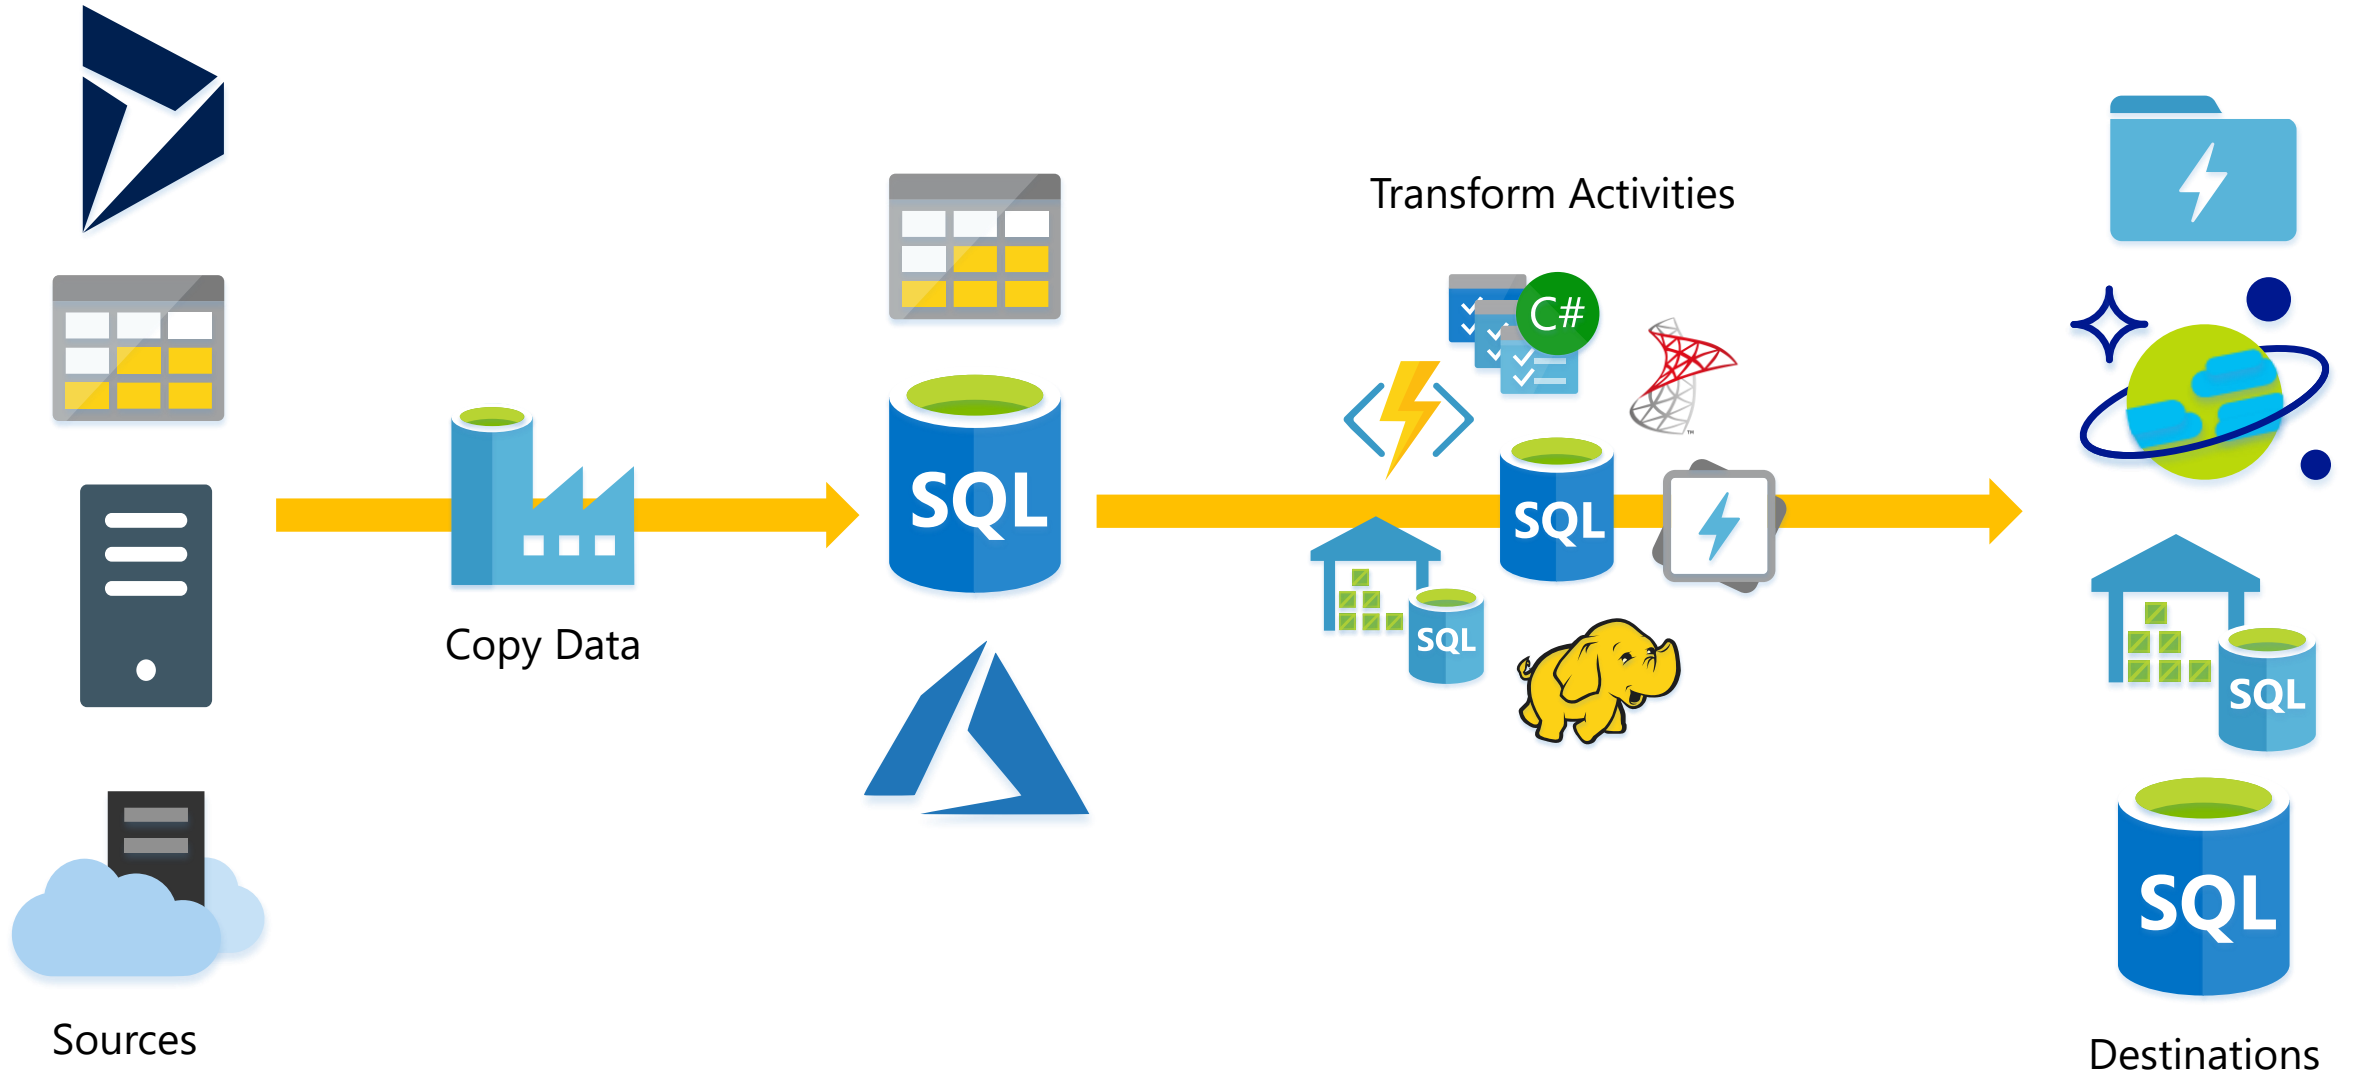

- ✓ Create, schedule and manage data pipelines
- ✓ Fully managed ETL/ELT service in the cloud
- ✓ Run your SQL Server Integration Service packages directly in the cloud
- ✓ Accelerate your data integration with multiple native data connectors
- ✓ Modernise your data warehouse with big data integration
- ✓ Orchestrate your data integration workflows wherever your data lives

Getting started >

# What is Azure Data Factory?

# What does Azure Data Factory do?

# Data Factory Components

## 1 Linked Services – How do I connect?

Like the SSIS Connection Manager!

SQLDBLinkedService

ConnectionString: *Server=MyServer;Database=myDataBase*  
UserName: *"MrPaulAndrew"*  
Password: *\*\*\*\*\**

# Data Factory Components

1

## Linked Services

2

## Data Sets – What slices/partitions does my data have?

dbo.DimCustomer

/RAW/Orders/2018/01/01/Orders.csv

# Data Factory Components

1

**Linked Services**

2

**Data Sets**

3

**Activities** – What do we want to happen?  
With what conditions?

## U-SQL Activity

Script: *wasb://:myscripts/ProcessOrders.usql*

AUs: *5 units*

Priority: *1000*

Parameters: *@Output = "RAW/Orders/..."*

# Data Factory Components

1

**Linked Services**

2

**Data Sets**

3

**Activities**

4

**Pipelines** – What groups of work do I want to do?

Conclusions

Design Patterns  
ETL/ELT in Azure

# Data Factory Issues & Limitations

- ▶ **Time Slices** – Complex, difficult to change & provision
- ▶ **Pricing** – High and low frequency
- ▶ **Control Flow** – Not conditional. Pass or fail
- ▶ **Developer Tools** – VS or Portal JSON templates
- ▶ **Hard Coded Pipelines** – No dynamic values
- ▶ **C# Coding** – Often required for anything complex
- ▶ **Monitoring** – Times slice bound, focused on datasets
- ▶ **Connectivity** – Limited to Microsoft supported linked services

## Custom Activities – A .NET Console App Executed Using Azure Batch Service

VM node size set per compute pool:

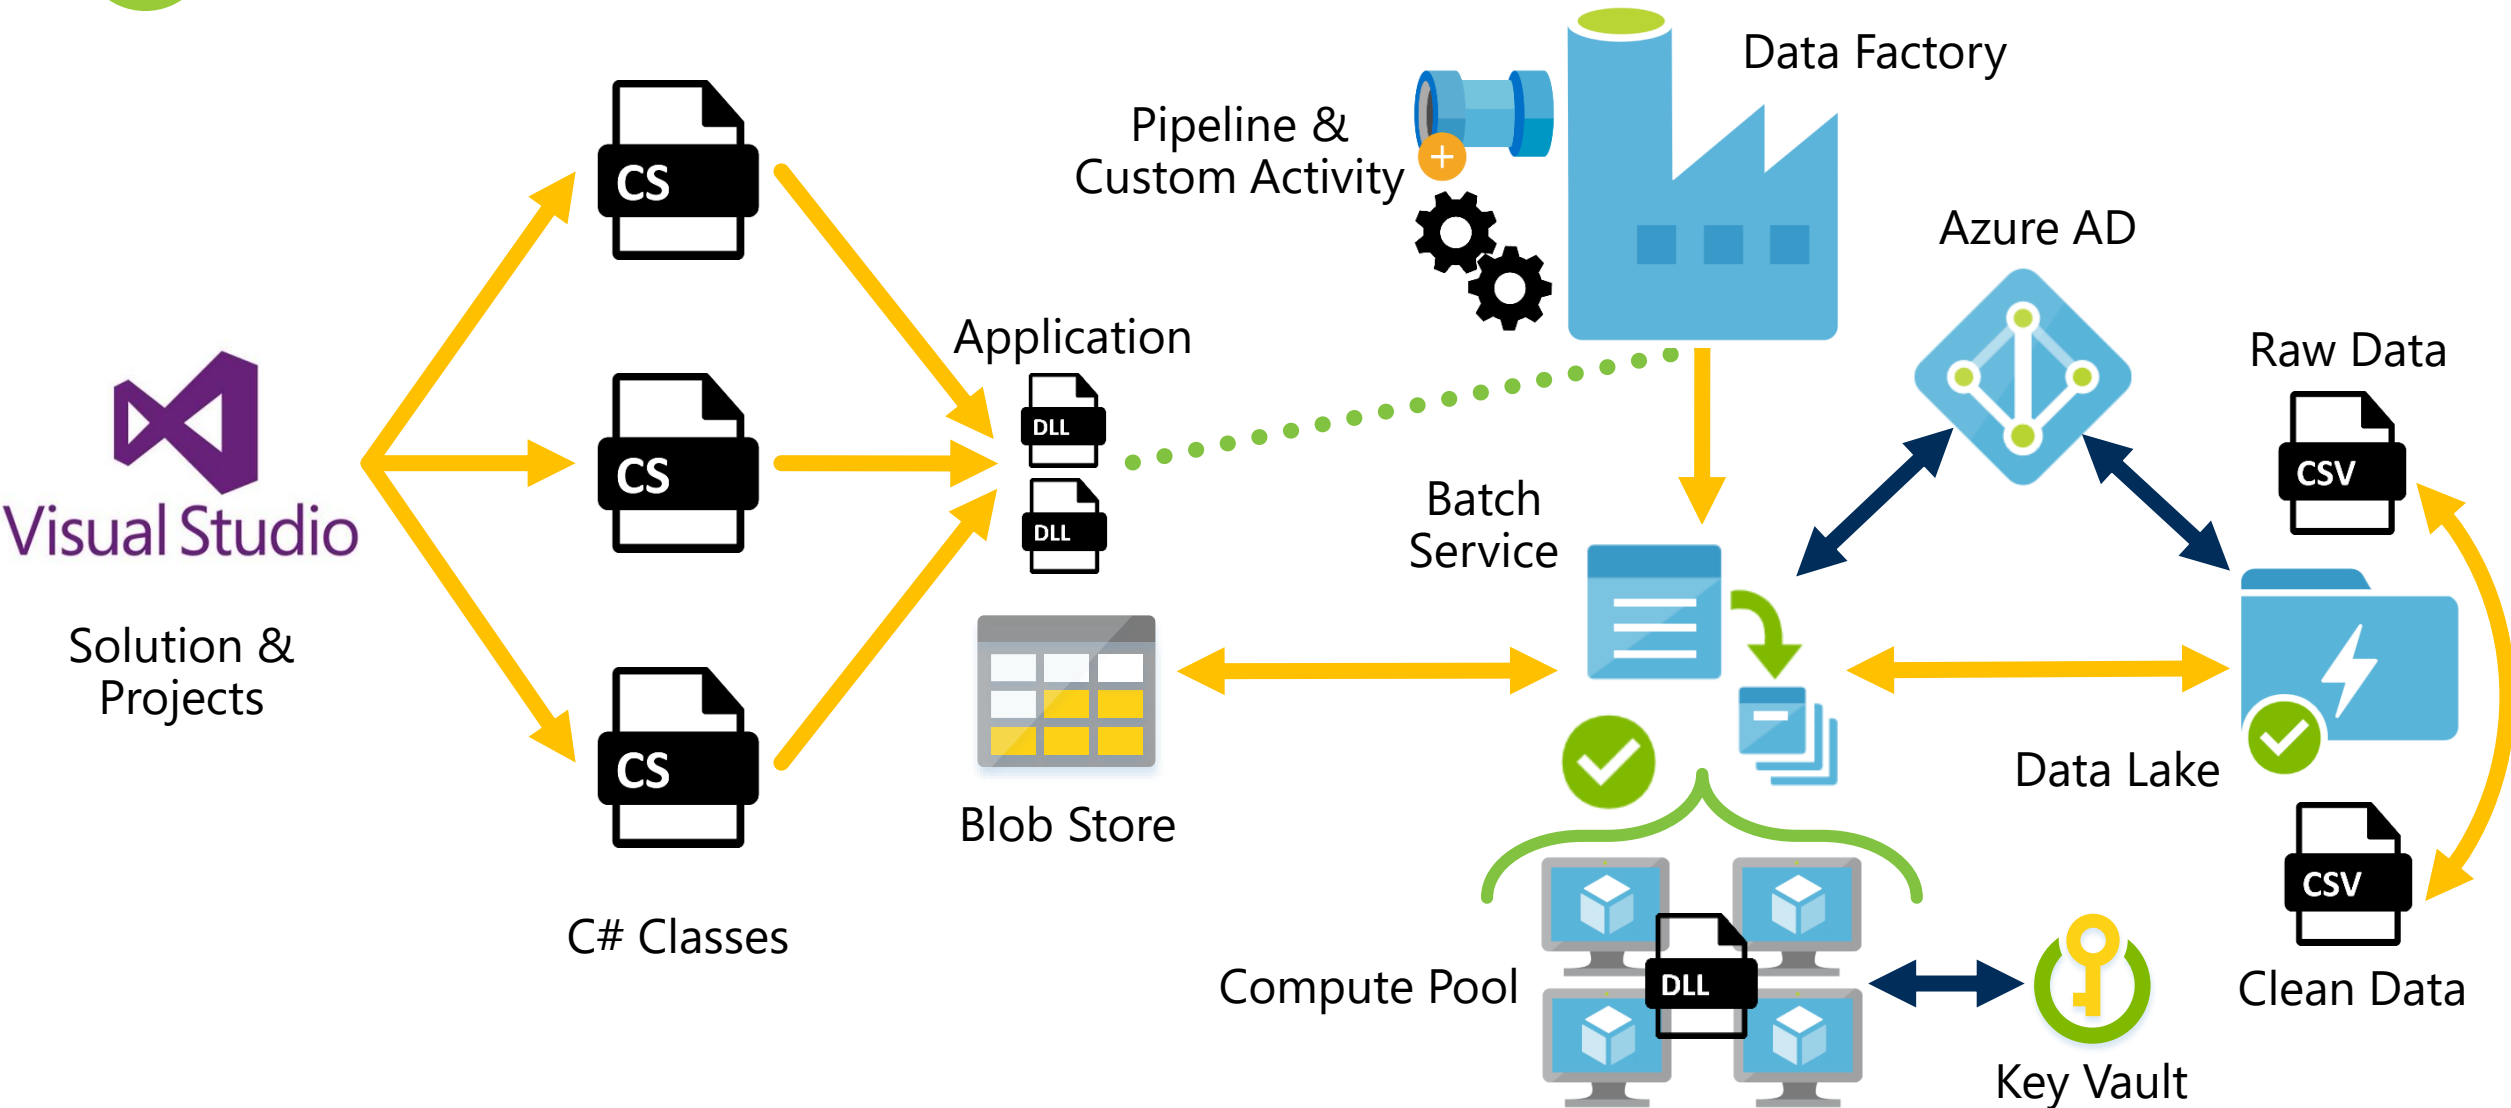

A1	Standard	★	A2	Standard	★	A3	Standard	★
1	Cores		2	Cores		4	Cores	
1.8	GB		3.5	GB		7	GB	
	1 TB	OS disk size		1 TB	OS disk size		1 TB	OS disk size
	70 GB	Resource disk size		135 GB	Resource disk size		285 GB	Resource disk size
	2	Max data disk		4	Max data disk		8	Max data disk
Unable to display pricing			Unable to display pricing			Unable to display pricing		

- ▶ 1 compute node = 1 virtual machine.
- ▶ 1 job per compute node.
- ▶ Max of 4 tasks per node.
- ▶ OS on D drive, not C.
- ▶ Special environment variables.
